Target Runtime

Data Understanding

IMDB

- Movie Title
- Release Year
- Runtime (Minutes)
- Genres
- Average Ratings (1-10 Point Scale)
- Number of Votes

TN Movies Budget

- Movie Title
- Production Budget
- Gross
- Profit (Calculated)

Data Process

Joined data sets into one for better understanding

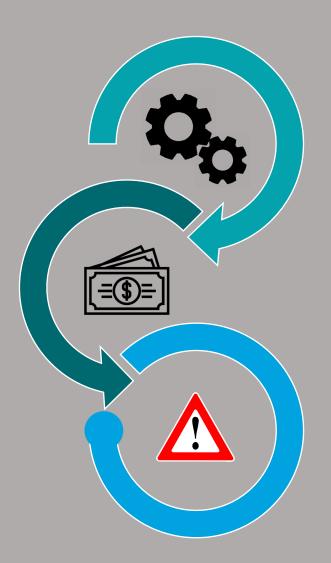

Identified metrics (profit by genre, runtime by top performers, ROI)

Built visualizations based off these metrics

Chosen Metric: Profit

Why Profit?

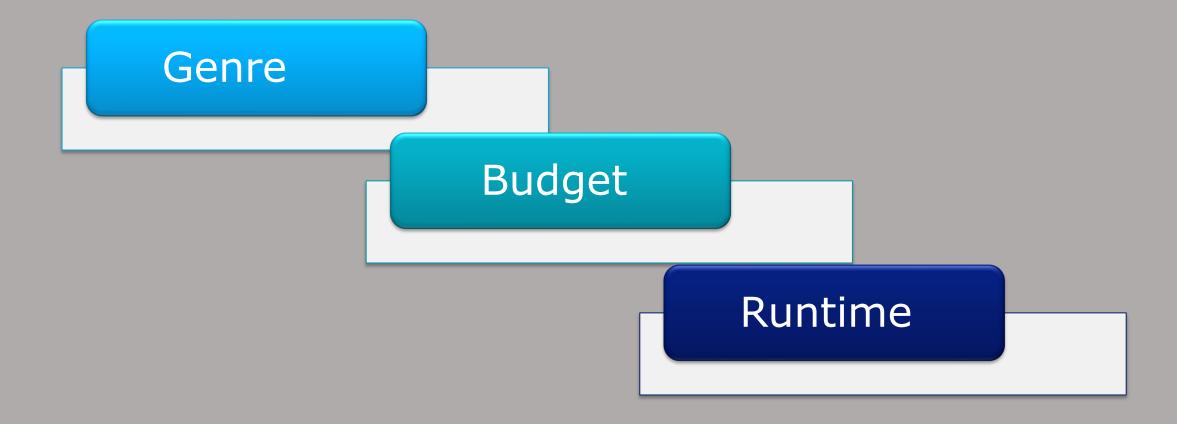

Ensures Computing Visions is not operating in deficit in the early stages of the business

Best trackable indicator in financial health throughout its lifespans

Ability to determine whether future risks should be taken

Business Overall - Recommendations

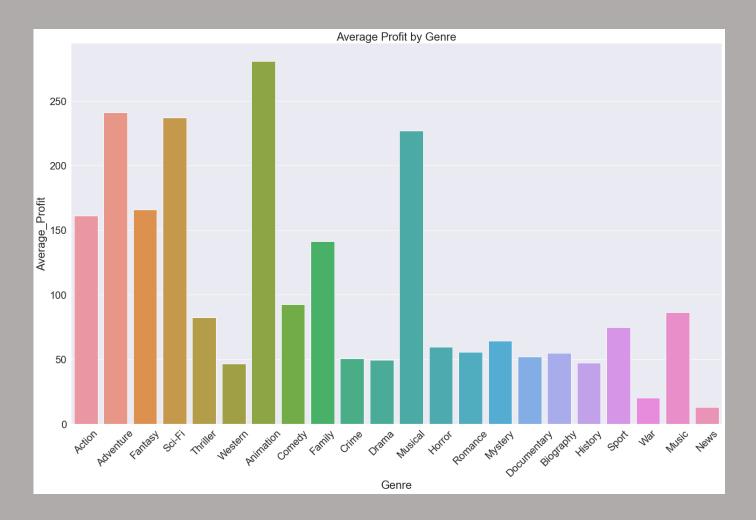

Recommendation: Genre

Animation

Profits for Animated movies are significantly higher, on average, than profits for other movie genres

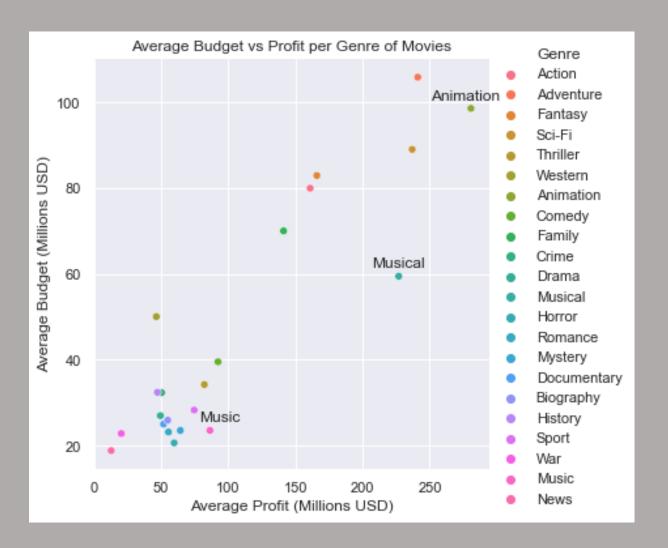

A 1-sample t-test determined Animation genre to have higher profits

Recommendation: Budget

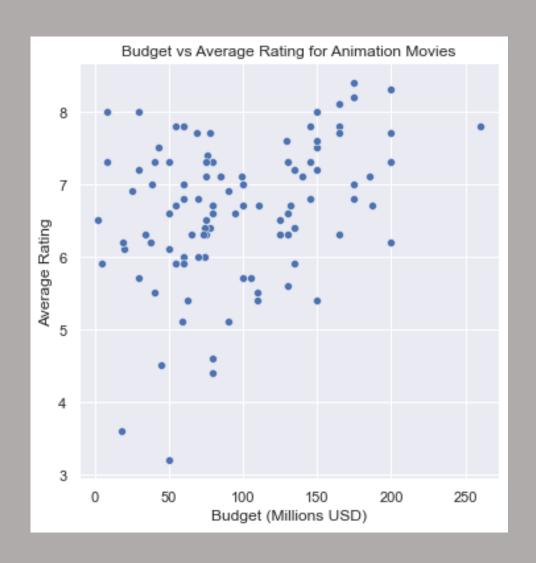

PT 1

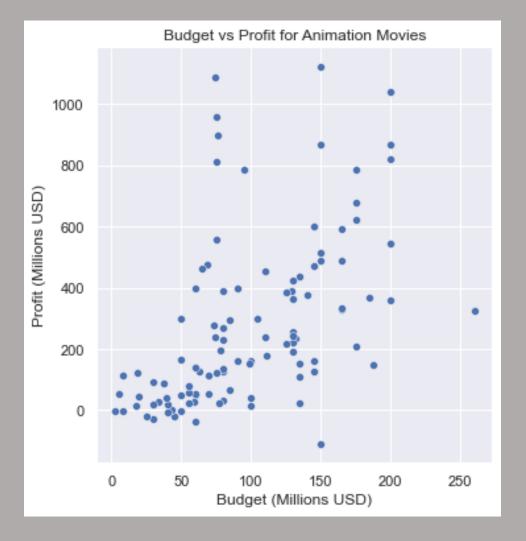

Average Profits has a .91 correlation with Average Budget

Recommendation: Optimal Budget

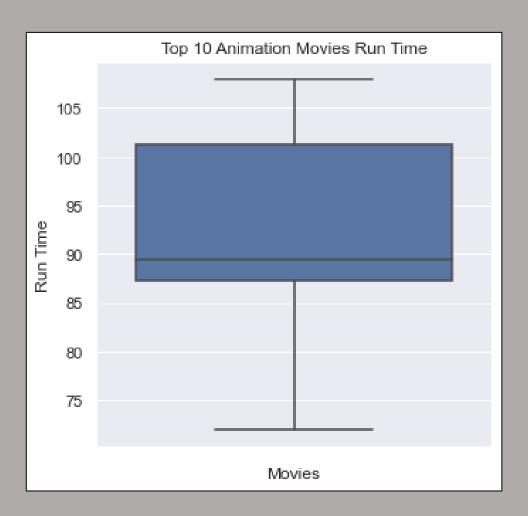

PT 2

Recommendation: Runtime

- **Optimal Movie Runtime**
 - 87 Minutes to 101 Minutes
- 10 Highest Rated Movies
 - 91 Minutes

Recommendations For Computer Vision

Overall

Animated movies generate superior returns

Higher Investment = Higher Return

87 Minutes to 101 Minutes is the optimal runtime

Recommendation Summary

Next Steps

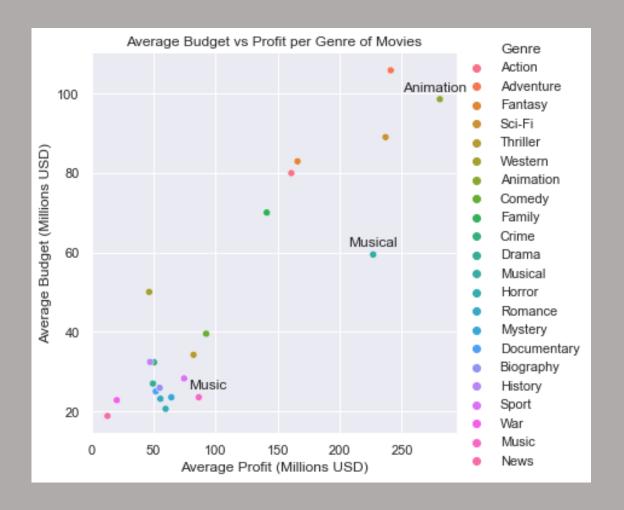

Focus on cultivating talented in-house animation or seeking contracted overseas animation

Musical and Music offer profitable options

Invest heavily

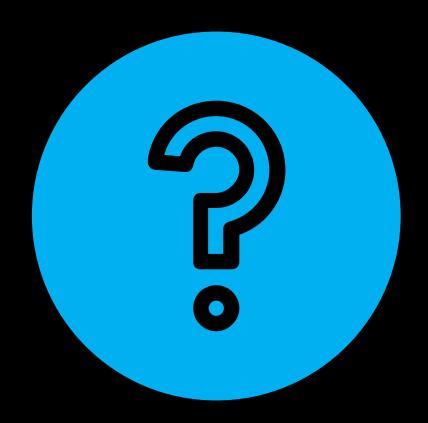

Examine the genres per company ie Disney, Fox, etc

Check casting, directors, and writers for profitability correlation
